Introduction

1. This report details the ornithological survey work undertaken at the site of the proposed Loch Toftingall Battery Energy Storage System (BESS) (hereafter referred to as the ‘Proposed Development’) by Natural Research (Projects) Ltd (NRP) between April 2017 and April 2019. A minimum of two breeding seasons and two non-breeding seasons have been covered.
2. The objectives of the study were to:
 - ◆ Map the distribution of breeding birds, including scarce breeding species listed in Annex 1 of the EU Birds Directive (2009/147/EEC) on the Conservation of Wild Birds 1979 (the Birds Directive) or Schedule 1 of the Wildlife and Countryside Act 1981 (as amended) (WCA).
 - ◆ Quantify the level of bird flight activity by breeding, wintering and foraging birds of potential conservation importance; and
 - ◆ Record the presence and abundance of other birds of conservation importance (those listed in Biodiversity Action Plans (BAPs) or on the Red List of Birds of Conservation Concern (BoCC) (Eaton *et al.*, 2015) throughout the survey period.
3. This report is supported by Appendix 8.2: Confidential Ornithology.

Desk Study

4. The Site is 1.7 km from the Shielton Peatlands Site of Special Scientific Interest (SSSI), a component of the Caithness and Sutherland Peatlands Special Protection Area (SPA) and Ramsar site (**Figure 1**). The Caithness and Sutherland Peatlands SPA is classified for its breeding populations of black-throated diver (*Gavia arctica*), red-throated diver (*Gavia stellata*), common scoter (*Melanitta nigra*), wigeon (*Anas penelope*), golden eagle (*Aquila chrysaetos*), hen harrier (*Circus cyaneus*), merlin (*Falco columbarius*), short-eared owl (*Asio flammeus*), golden plover (*Pluvialis apricaria*), wood sandpiper (*Tringa glareola*), greenshank (*Tringa nebularia*) and dunlin (*Calidris alpina*). All of these features are described as being in Favourable condition with the exception of common scoter which is described as being in Unfavourable Declining condition and short-eared owl which has not been assessed.
5. Loch Watten SSSI, which is a constituent of the Caithness Lochs SPA and Ramsar site, is located 5.3 km from the Proposed Development boundary (**Figure 8.1**). The Caithness Lochs SPA is classified for its wintering populations of whooper swan (*Cygnus cygnus*), Greenland white-fronted goose (*Anser albifrons flavirostris*) and greylag goose (*Anser anser*) all of which are described as being in “Favourable” condition.

Study Areas and Survey Periods

6. The study area for ornithological surveys relevant to the Proposed Development is situated in an area of commercial forestry, agricultural fields, rough grazing and moorland (**Figure 8.2**).
7. Some birds range over large areas and are therefore potentially vulnerable to the effects of built developments a considerable distance away. Hence the ornithological study area encompassed a series of survey boundaries extending up to 2 km from the initial Site boundary. These boundaries defined the study area for surveys of certain species or for a particular survey method i.e., 500 m for flight activity, for breeding passerines and waders, and for wintering birds; 1 km for breeding barn owl; 2 km for skuas, breeding raptors and short-eared owl (**Figure 8.2**).
8. Following the completion of baseline surveys, a smaller Proposed Development layout was decided on, this final layout is shown in **Figure 8.3**. Baseline surveys were originally designed to cover the larger area shown in **Figure 8.2**.
9. The survey effort given in this report details all surveys undertaken, the results of all surveys are given along with results that are tailored to the study area of the final layout referred to as the ‘reporting area’.

Field Survey Methods

10. The field surveyors were Alex Dodds (AD), David Lambie (DL), Duncan Cameron (DJC), Kevin Cuthbert (KC), Ronan Dugan (RD), Janice Duke (JD), Paul Higson (PH), Fiona Leckie (FL), Neil Robertson (NR), Paul Rowan (PR), Paul Stagg (PS) and Phil Swainson (PS). All surveyors are very experienced and familiar with the area and the species likely to occur there. Field surveyors completed survey work with emphasis placed on the importance of carrying out surveys in a systematic and standardised way to enable direct comparison of data from different survey periods and sites.

Flight Activity

11. Information on bird flight activity was collected during timed watches from strategic Generic Vantage Points (GVPs) using the methods described by Band *et al.* (2007). GVPs were selected through a mix of Geographic Information System (GIS) analysis and field trials, with the aim of maximising ground visibility within the 500 m flight activity survey area using the minimum number of vantage points (**Figure 8.4**).
12. Four vantage point locations were used (**Tables 1, 2a & 2b; Annex 2**). The visibility from each GVP drawn at 20 m elevation above the ground was derived using a GIS (**Figure 8.4**).

Table 1. GVP locations and dates used.

GVP No.	Grid reference	Dates GVP utilised
1	ND 18184 54373	May 2017 to April 2019
2	ND 17447 52978	April 2017 to April 2019
3	ND 19530 53410	May 2017 to April 2019
4	ND 18913 52868	April 2017 to April 2019

13. Observers at GVPs positioned themselves to minimise their effects on bird behaviour. A viewing arc not exceeding 180° was scanned. Watches were undertaken during daylight hours by a single observer in a wide range of weather conditions, mainly in conditions of good ground visibility (>2 km) and when the cloud base was higher than most elevated parts of the survey area.
14. A minimum of 36 hours of observation has been completed from each GVP for each period of each year (April to August classed as the breeding period and September to March classed as the non-breeding period). Following consultation with NatureScot an additional six hours were completed from each GVP in April 2019 to capture additional whooper swan flight activity (**Tables 2a & 2b**). In total 596.67 hours of observation has been undertaken with 308.5 hours during the breeding season and 288.17 hours in the non-breeding season.
15. When possible, observations were stratified across three daylight periods (termed ‘early’, ‘middle’ and ‘late’) to allow for diurnal variation in activity rates. The timing of watches within each period was adjusted each month in accordance with sunrise and sunset times (**Annex 1**). A wide range of weather conditions were sampled including rain showers, cloud cover from 0 to 100 % and wind speeds up to Beaufort Force 7 (**Annex 3**).

Table 2a. Summary of monthly GVP effort in Year 1, 2017 to 2018 (data are hours of observation).

16. During each watch three hierarchical recording methods were used, as follows:

- Focal bird sampling – timed. The viewing arc was scanned constantly until a *Target A species*¹ was detected in flight. Once detected, the bird was followed until it ceased flying or was lost from view, with the duration of the flight recorded to the nearest second. The route followed by the bird was plotted in the field onto a 1:25,000 scale map, with the direction of flight indicated regardless of whether or not the bird was within the survey area. The bird's flying elevation above the ground was estimated at the point of detection and at 15 second intervals, thereafter, using a countdown timer with an audible alarm. Height bands to classify flying elevation were less than 10 m, 10 m to 30 m, 30 m to 50 m, 50m to 100 m, 100 m to 150 m and greater than 150 m. Where simultaneous flight activity by a number of birds was observed and it was not possible to plot individual flight lines, areas of flight activity were plotted on the field maps.
- Focal bird sampling – untimed. The same scanning procedure as described above was used. However, flights of *Target B species*² were not timed, instead the flight path was mapped and flying elevation was recorded at the start and when it changed during the recorded bout. Where a flock was observed a central flight line representative of the route was estimated.
- Activity Summaries. At the end of each five-minute period flight activity within the survey area by species of lesser conservation importance (*Target C species*)³ was summarised. The number of birds recorded in any one period was the minimum number of individuals that could account for the activity observed. The height, direction and number of individuals involved in notable bird movements were recorded.

¹ *Target A species* were drawn from those listed in Annex 1 of the Birds Directive and Schedule 1 of the WCA. See Annex 6 for a full list.

² *Target B species* were migratory birds of conservation importance, in this instance geese and certain waders. See Annex 6 for a full list.

³ See Annex 6.

17. Data were entered in the field onto recording sheets and later transferred to Microsoft Excel spreadsheets. Maps of flight activity by Target Species were compiled for each watch. Each flying bout was numbered and cross-referenced to the relevant flight path on the map.

Flight Activity – Migratory Period Watches

18. Using the same methodology described above, additional watches to record migratory movements of swans, geese and waders at a landscape scale were completed during one spring and one autumn period. Three Migration Watch Point (MWP) locations were utilised individually during different periods (**Table 3; Figure 8.2**). These locations gave good broad spatial coverage of the Site in respect of birds moving on a predominantly north-south axis. Observations were made for 36 hours between September and November 2017 (autumn) and for 36 hours between March and May 2018 (spring) totalling 72 hours. (**Table 3; Annex 4**). A range of weather conditions were sampled with an emphasis on days that were conducive to migration (**Annex 5**).

Table 3. Summary of monthly MWP effort 2018 (data are hours of observation).										
MWP No.	Location	2017			Total	2018			Total	
		Sept	Oct	Nov		Mar	Apr	May		
A	ND 17617 52936	9.00	5.50	11.00	25.50					
B	ND 17447 52978		10.50		10.50					
C	ND 18184 54373					9.00	21.00	6.00	36.00	

Scarce Breeding Birds

19. Priority was given to detecting the species considered, after inspection of the available habitats, most likely to breed in the area: osprey (*Pandion haliaetus*), hen harrier, barn owl (*Tyto alba*), short-eared owl, merlin, golden plover and greenshank.
20. In addition to the survey effort on GVP watches and the Breeding Birds of Open Ground Surveys, a total of 67.25 hours were spent searching for evidence of Scarce Breeding Birds in 2017 and 2018 (**Table 4**).
21. Surveys were undertaken within suitable habitat which was located within the 2 km survey buffer for osprey, hen harrier, merlin and short-eared owl, the 1 km survey buffer for barn owl and the 500 m buffer for greenshank (**Figure 8.2**).
22. Any evidence of potential breeding was recorded including adults present in breeding habitat, territorial display, nest building, adults carrying prey items, active or recently used nests and fledged young. All activity and nest locations were marked on OS 1:25,000 maps with details of the sighting including age, sex and behaviour.

Osprey

23. Survey methods in Hardey *et al.* (2013) were followed. Emphasis was given to large, mature trees, particularly conifers that were prominent within the landscape and also known artificial nesting platforms. Watches were made over likely areas and any territorial activity recorded.

Hen harrier

24. Survey methods in Hardey *et al.* (2013) were followed, with emphasis given to any stands of tall heather or other rank vegetation with searches made for signs of occupancy and watches for territorial activity.

Barn owl

25. Survey methods based on Hardey *et al.* (2013) were followed. Systematic searches for potential nest and roost sites were undertaken. Emphasis was placed on searching for birds, nests, pellets, feathers and faecal splash in potentially suitable buildings within 1 km of the Proposed Development.

Short-eared owl

26. Survey methods in Hardey *et al.* (2013) were followed. Emphasis was given to stands of tall heather and other rank vegetation, with searches made for signs of occupancy and watches for territorial activity.

Merlin

27. Survey methods in Hardey *et al.* (2013) were followed, with emphasis given to any stands of tall heather, boulders, hummocks, bushes and trees including old crows nests (which could be re-used by merlin) were checked for signs of occupation (e.g. plucked prey, moulted feathers, pellets and faeces).

Greenshank

28. Survey methods in Gilbert *et al.* (1998) were followed, with emphasis given to searching all waterbodies, including lochs, lochans, pool complexes and rivers. Searches were also undertaken in young plantation and open forest.

Breeding Birds of Open Ground Survey

29. Surveys were completed using a four-visit adapted Brown & Shepherd (1993) method for upland waders. These visits were completed between April and early July 2017 in open ground within a 500 m survey boundary (**Figure 8.2**). Selected bird species were surveyed, namely those included on Annex 1 of the Birds Directive, Schedule 1 of the WCA, Red-listed BoCC and those listed on the UK and local BAPs together with selected other species (see **Annex 7** for a full list).
30. Surveys were completed four times between April and July to allow for differences in detection rate between early and late breeding species. Fieldwork was not undertaken in conditions considered likely to affect bird detection, for example, strong winds (greater than Beaufort Force 4), persistent precipitation, poor visibility (less than 300 m) or in unusually hot or cold temperatures. Surveys were undertaken for a total of 17 hours (**Table 5**).
31. The survey aimed to cover the ground systematically with a constant search effort. All points within the survey areas were approached closely typically to within 100 m. Patches of scrub, isolated trees, rocky outcrops and streams were investigated closely and surveyors paused at regular intervals to scan and listen for calling and singing birds. Careful attention was given to recording behaviour indicative of breeding with care taken to avoid counting the same individual more than once.
32. The location and activity of birds were mapped onto enlarged 1:25,000 scale OS maps using standard BTO codes (Marchant, 1983). The position of each bird was mapped at the point of first detection and flight lines recorded. At the end of each visit, a summary map was compiled showing the locations of each identified territory or breeding pair. The following evidence was considered diagnostic of breeding: song, courtship or territorial display; territorial dispute; nest building and hole excavation; agitated behaviour by adult bird(s) indicative of the presence of a nearby nest or young (e.g., repetitive alarm calling, distraction display); adult(s) carrying food; presence of newly fledged young; adult(s) removing faecal sac.
33. Where a number of breeding individuals were present and it was not possible to determine the exact number of breeding pairs, a method was devised to allow the number of discrete territories to be estimated. Registrations of individual birds were deemed to represent discrete breeding territories / pairs if the distance between them was more than 250 m (500 m for curlew, 200 m for small passerines). Whilst it is recognised that these distances are arbitrary and the territory size varies both inter- and intra- specifically, this approach produces a standardised index of abundance based on the distance that members of a breeding pair are likely to move

during the survey period. In cases where two individuals were considered to constitute a pair of birds, the location of the pair was placed centrally by convention.

34. Population estimates were derived by comparing the summary maps for the four survey visits.

Again, a method was devised whereby discrete territories could be estimated. Territories plotted during each visit were considered to be separate from one another if they were located more than 1000 m apart (500 m for snipe, common sandpiper and skylark, 300 m for other small passerines). These distances were chosen to reflect the distances birds could plausibly move between survey dates. The locations of territories mapped in more than one survey period were plotted centrally.

Winter Walkover Surveys

35. Walkover surveys were undertaken in March 2018 and between October 2018 to March 2019.

(Table 6). Surveys were designed to record any important assemblages of migrant and wintering birds on the site and within a 500 m study area (Figure 8.2).

36. Survey routes meandered to encompass as much ground as practical. Where practicable surveyors used a different route to maximise the eventual spatial coverage of the site and paused to scan for birds. Walkover surveys totalling 15.75 hours were undertaken and a range of weather conditions sampled, although wind speeds of over Beaufort Force 5 were avoided to improve aural detection of species (Table 6).

Hen Harrier Winter Roost Watches

37. Roost surveys were undertaken following the methods detailed in Gilbert *et al.* (1998) and Hardey *et al.* (2013). Dusk watches for signs of winter roosting by hen harriers were carried out over suitable habitats where possible within the 2 km survey buffer in September and November 2017 for a total of 4.5 hours (**Table 7**). Observations of roosting hen harriers were also made from other surveys.

Table 7. Survey details of checks for Hen Harrier Winter Roosts in 2017.

Loch Toftingall Waterfowl Surveys

38. A combination of generic and species-specific surveys was undertaken using the methodologies described in Gilbert *et al.* (1998). Surveys were made in each month between April 2017 and April 2019 of waterfowl using Loch Toftingall (**Table 8**) including searches for breeding birds during the breeding season. Surveys were carried out for a total of 126.4 hours.

Table 8. Survey details for Loch Toftingall Waterfowl Surveys.

Field Survey Results

Divers

Occurrence and Status

39. **Black-throated diver** and **red-throated diver** were recorded during baseline surveys. Both species are listed on Annex 1 of the Birds Directive and Schedule 1 of the WCA and are qualifying interests of the Caithness and Sutherland Peatlands SPA.

Abundance and Distribution

40. **Black-throated diver** was recorded in June and July 2017 with observations of a single bird on Loch Toftingall and four flights involving a total of five birds (**Figures 8.5 & 8.6**). No observations were made during the 2018 breeding season. There was no evidence of breeding within the study area during baseline surveys.

41. **Red-throated diver** was recorded regularly throughout the 2017 and 2018 breeding seasons, and in March 2019, with all observations being of birds either on Loch Toftingall or commuting to and from here (**Figures 8.5 & 8.6**). There was no evidence of breeding within the study area during baseline surveys.

Flight activity recorded during GVPs

42. Three **black-throated diver** flights involving four birds were recorded during GVP surveys for a total duration of 545 seconds (**Figure 8.5; Table 9**).
43. Eleven **red-throated diver** flights involving fourteen birds were recorded during GVP surveys for a total duration of 1,685 seconds (**Figure 8.5; Table 9**).

Table 9. Flight activity and elevation by diver species recorded during GVP watches (April 2017 to April 2019).

Wildfowl

Occurrence and Status

44. **Whooper swan, greylag goose, pink-footed goose** and **wigeon** were recorded during baseline surveys. Whooper swan is found on Annex 1 of the Birds Directive and is a qualifying species for the Caithness Lochs SPA. Greylag goose and wigeon are qualifying species for the Caithness Lochs SPA. Pink-footed goose are a regular winter migratory species and as such are afforded protection under the Birds Directive.
45. **Goldeneye** was recorded breeding within the study area. Goldeneye is a scarce breeding species in Scotland and is a red-listed Bird of Conservation Concern.
46. Teal, mallard and tufted duck were recorded breeding on Loch Toftingall and other other wildfowl species including mute swan, Canada goose, goosander and pochard were recorded on Toftingall Loch during Waterfowl Surveys but no breeding activity was recorded (**Table 10**).

Abundance and Distribution

47. **Whooper swans** were recorded regularly during baseline surveys with flocks of between one and 27 individuals. Most observations were of birds on or commuting to and from Loch Toftingall during the non-breeding period. A maximum of three birds were present between May and August 2017, but no breeding behaviour was recorded during baseline surveys (**Figures 8.8 & 8.9**).
48. Two flocks of **greylag geese**, consisting of two and seven birds, were recorded on Loch Toftingall with all other birds recorded being in flight. Birds were recorded in all months except July and August with the majority recorded during the non-breeding period (**Figures 8.8 & 8.10**).
49. All observations of **pink-footed goose** were of birds in flight with no birds observed feeding or roosting within the study area. Flock sizes ranged from one to 220 birds and were recorded during February, March, April, October, November and December. (**Figures 8.8 & 8.10**).
50. **Wigeon** was recorded once during baseline surveys in November 2017. A flock of eight individuals were seen on Loch Toftingall (**Table 10**). No birds were recorded using Loch Toftingall during the breeding season.
51. **Goldeneye** bred within the study area with a male observed in May 2017 and a maximum of four adults and five juveniles recorded in August 2017. Adults were observed in March, April and August 2018 but no evidence of breeding was recorded (**Table 10**).

Flight activity recorded during GVPs

52. Twenty-one flights of **whooper swan** involving 105 birds were recorded during GVP watches (**Figure 8.8; Table 11**).

53. Seventy-four flights by **greylag goose** were recorded during GVP watches involving 1,556 birds (**Figure 8.7; Table 11**).

54. Fourteen flights by **pink-footed goose** were recorded during GVP watches involving 742 birds (**Figure 8.7; Table 11**).

Scarce Breeding Raptors and Owls

Occurrence and Status

60. Sightings of **hen harrier**, **rough-legged buzzard** (*Buteo lagopus*), **osprey**, **merlin**, **peregrine**, **white-tailed eagle** and **barn owl** were recorded. All these are listed on Annex 1 of the Birds Directive, and Schedule 1 of the WCA except rough-legged buzzard. Hen harrier and merlin are red-listed Birds of Conservation Concern. Other raptors of lesser conservation concern were also recorded including common buzzard (*Buteo buteo*), common kestrel (*Falco tinnunculus*) and sparrowhawk (*Accipiter nisus*).

Abundance and Distribution

61. **Hen harrier** was recorded during both non-breeding seasons and both breeding seasons, although the majority of observations were made during the non-breeding season with only five observations in July and none in June. No breeding behaviour was observed within the study area. Roosting birds (or birds exhibiting pre-roosting behaviour) were observed within the study area during September, October, November, December and January (**Appendix 8.2: Confidential Figure 8.2; Figures 8.10 & 8.11; Tables 13 & 14**).

62. Single wintering **rough-legged buzzards** were recorded within the study area in April 2017 and then regularly in both non-breeding periods. (**Figures 8.11 & 8.12**).
63. **Peregrine** was recorded on three occasions in the non-breeding period. No evidence of breeding was recorded within the study area (**Figure 8.10**).
64. **Merlin** was recorded infrequently throughout the survey period with no evidence of breeding within the study area (**Figures 8.10 & 8.11**).
65. **Osprey** was regularly recorded during both breeding periods with birds regularly recorded fishing at Loch Toftingall and recorded commuting to and from the loch. A nest location was located outside of the study area (**Appendix 8.2: Confidential Figure 8.1; Figures 8.10 & 8.11**)
66. A single juvenile **white-tailed eagle** flew south over Loch Toftingall in November 2017 (**Figure 8.10**).
67. A **barn owl** nest was found in a ruined building within the study area (**Appendix 8.2: Confidential Figure 8.1**).

Flight activity recorded during GVPs

68. Eighty-nine flights by **hen harrier** were recorded during GVP watches involving 90 birds (**Figure 8.10; Table 13**).
69. Sixty flights by **osprey** were recorded during GVP watches involving 65 birds (**Figure 8.10; Table 13**).
70. Nineteen **rough-legged buzzard** flights were recorded during GVP watches, all involving the same single bird (**Figure 8.10; Table 13**).
71. Three **peregrine** flights were recorded during GVP watches, all involving single juvenile birds (**Figure 8.10; Table 13**).
72. Six **merlin** flights were recorded during GVP watches, all involving single birds (**Figure 8.10; Table 13**).

Incidental flight activity

73. Twenty-four flights by **hen harrier** were recorded during the course of other surveys during the study period (**Figure 8.11**).
74. Thirteen flights by **rough-legged buzzard** were recorded during the course of other surveys during the survey period (**Figure 8.11**).
75. Three flights by **merlin** were recorded during the course of other surveys during the study period (**Figure 8.11**).

76. Forty-one flights by **osprey** were recorded during the course of other surveys during the study period (**Figure 8.11**).

Hen Harrier Winter Roosts

77. Eight sightings of roosting hen harrier were recorded during all surveys including those timed to attempt to observe possible roost behaviour. Male, female and 'ringtail' (unidentified female or juvenile brown) birds were seen. (**Appendix 8.2: Confidential Figure 8.2; Table 14**).

Table 14. Observations of roosting hen harriers made during all surveys.

Waders

Occurrence and Status

78. **Curlew** (*Numenius arquata*), **golden plover** (*Pluvialis apricaria*), **greenshank** (*Tringa nebularia*), **whimbrel** (*Numenius phaeopus*), **lapwing** (*Vanellus vanellus*), **woodcock** (*Scolopax rusticola*) and **ringed plover** (*Charadrius hiaticula*) were recorded. **Greenshank** and **whimbrel** are listed on Schedule 1 of the WCA, and **Golden plover** is listed on Annex 1 of the Birds Directive. **Curlew** is a red-listed Bird of Conservation Concern and is also listed on IUCN 'Red list – 'Near Threatened' (IUCN, 2021). **Lapwing**, **whimbrel**, **woodcock** and **ringed plover** are red-listed Bird of Conservation Concern. Snipe (*Gallinago gallinago*) and common sandpiper (*Actitis hypoleucos*), waders of lesser conservation concern, were also recorded (**Figures 8.12, 8.13 & 8.15; Tables 15, 16 & 18**).

Abundance and Distribution

79. Small numbers of **curlew** were present in the breeding season (with records in March, April, May, June and July). Although three territories were recorded within the survey area no territories were found within 500 m of the Proposed Development (**Figure 8.15; Table 18**).
80. **Golden plover** were present through much of the year, with records in January, February, March, April, May, August, September, October and November. No breeding activity was recorded within the study area.

81. Migrant **Greenshank** were observed on three occasions between August and October and a single **whimbrel** was observed in August.
82. **Lapwing** were seen in February, March, April, May, June, July, August, September and December. Although three territories were recorded within the survey area no territories were found within 500 m of the Proposed Development (**Figure 8.15; Table 18**).
- Flight activity recorded during GVPs*
83. One hundred and thirteen **curlew** flights involving 144 birds were recorded (**Figure 8.12; Table 15**).
84. Twenty **golden plover** flights involving 1289 birds were recorded. None of these flights were recorded within 500 m of the Proposed Development (**Figure 8.12; Table 15**).
85. Two **greenshank** flights involving 5 birds were recorded. None of these flights were recorded within 500 m of the Proposed Development (**Figure 8.12; Table 15**).
86. One **whimbrel** flight involving a single bird was recorded. This flight was not recorded within 500 m of the Proposed Development (**Figure 8.12; Table 15**).

Skuas

Occurrence and Status

90. **Arctic skua** (*Stercorarius parasiticus*) and **great skua** (*Stercorarius skua*) were recorded; **arctic skua** is a red-listed Bird of Conservation Concern.

Abundance and Distribution

91. **Arctic skua** was recorded in flight once in May 2017 and three times in July 2018. There was no evidence of breeding within the study area during baseline surveys.

92. **Great skua** was recorded in flight once in June 2017 and once in August 2018. There was no evidence of breeding within the study area during baseline surveys.

Flight activity recorded during GVPs

93. Four **arctic skua** flights involving five birds, were recorded (**Figure 8.14; Table 17**).

94. Two **great skua** flights involving four birds were recorded (**Figure 8.14; Table 17**).

Table 17. Flight activity and elevation by skua species recorded during GVP watches.

Species	Period	VP No.	No. birds	Height category

	Total		4					*	

Other Species of Interest

95. Although 13 skylark (*Alauda arvensis*) territories were recorded within the study area no territories were found within 500 m of the Proposed Development (**Table 18**). Buzzard (*Buteo buteo*), herring gull (*Larus argentatus*), lapwing and raven (*Corvus corax*) were the species recorded most often during the GVP watches (**Table 19**).

Table 18. Territory abundance of selected species recorded during the breeding bird surveys.

Species	Number of territories	
	Study Area	500 m buffer
Curlew	3	0
Lapwing	3	0
Snipe	6	0
Skylark	13	0

Table 19. The percentage of five-minute recording periods in which each species was encountered during watches from all GVPs. Total number of 5-minute recording intervals was 7160.

Species	Occurrence (%)	No. of 5-minute periods recorded
Buzzard	12.416	889
Herring gull	8.547	612
Lapwing	7.304	523
Raven	5.000	358

Annex 6 Flight Activity Survey Species Lists and BTO Codes

List A		List B		List C	
Species	BTO Code	Species	BTO Code	Species	BTO Code
Diver spp.	RH/BV	Greylag goose	GJ	Cormorant	CA
Common scoter	CX	Barnacle goose	BY	Heron	H.
White-tailed eagle	WE	White-fronted goose	EW(Euro)/NW(Grld)	Kestrel	K.
Golden eagle	EA	Pink-footed goose	PG	Buzzard	BZ
Hen harrier	HH	Brent goose	DB(Dark)/PB(Pale)	Sparrowhawk	SH
Goshawk	GI	Bean goose	BE	Red grouse	RG
Red kite	KT	Golden plover	GP	Grey partridge	P.
Osprey	OP	Dunlin	DN	Lapwing	L.
Merlin	ML	Greenshank	GK	Redshank	RK
Peregrine	PE	Whimbrel	WM	Common sandpiper	CS
Hobby	HY	Curlew	CU	Oystercatcher	OC
Barn owl	BO	Wood sandpiper	OD	Snipe	SN
Short-eared owl	SE	Tern spp.	AE/CN	Woodcock	WK
Black grouse	BK	Arctic Skua	AC	Herring gull	HG
Capercaillie	CP	Great Skua	NX	Cuckoo	CK
Nightjar	NJ			Ring ouzel	RZ
Chough	CF			Raven	RN
Whooper swan	WS				
Rare raptors	HZ/MR/RF				

Annex 7 Other Survey Species Lists and BTO Codes

List A		List B		List C			
Species	BTO Code	Species	BTO Code	Species	BTO Code	Species	BTO Code
Diver spp.	RH/BV	Greylag goose	GJ	Cormorant	CA	Song thrush	ST
Common scoter	CX	Barnacle goose	BY	Heron	H.	Grasshopper warbler	GH
White-tailed eagle	WE	White-fronted goose	EW(Euro)/NW(Grld)	Kestrel	K.	Wood warbler	WO
Golden eagle	EA	Pink-footed goose	PG	Buzzard	BZ	Spotted flycatcher	SF
Hen harrier	HH	Brent goose	DB(Dark)/PB(Pale)	Sparrowhawk	SH	Marsh/Willow tit	MT/WT
Goshawk	GI	Bean goose	BE	Red grouse	RG	Crested tit	CI
Red kite	KT	Golden plover	GP	Grey partridge	P.	Starling	SG
Osprey	OP	Dunlin	DN	Lapwing	L.	House/Tree sparrow	HS/TS
Merlin	ML	Greenshank	GK	Redshank	RK	Linnet	LI
Peregrine	PE	Whimbrel	WM	Common sandpiper	CS	Twite	TW
Hobby	HY	Curlew	CU	Oystercatcher	OC	Lesser redpoll	LR
Barn owl	BO	Wood sandpiper	OD	Snipe	SN	Crossbill/ Scottish c'bill	CR/CY
Short-eared owl	SE	Tern spp.	AE/CN	Woodcock	WK	Bullfinch	BF
Black grouse	BK	Arctic Skua	AC	Herring gull	HG	Hawfinch	HF
Capercaillie	CP	Great Skua	NX	Cuckoo	CK	Yellowhammer	Y.
Nightjar	NJ			Skylark	S.	Reed bunting	RB
Chough	CF			Tree pipit	TP	Corn bunting	CB
Whooper swan	WS			Dunnock	D.	Raven	RN
Rare raptors	HZ/MR/RF			Ring ouzel	RZ	Other wildfowl spp.	MS/MA/GD/T
