

LANDSCAPE AND VISUAL

A landscape and visual impact assessment establishes the potential effects of the proposed development on the surrounding landscape. The consented design consists of a Battery Facility compound which is 100m by 40m with the maximum building or equipment height of 5m.

The Battery Facility will be set within an area of landscaping. The landscaping scheme is shown in the figure below. The area will be planted with native tree and shrub species common to Caithness such as Birch, Rowan and Ash. The landscaping area will provide effective visual screening and biodiversity enhancement.
